Rare Species and the National Guard

Objectives:

- Overview of Sea Girt NGTC Natural Resources
- Overview of Rare Species Protection Measures

Sea Girt NGTC

Natural Resources Overview

- Wetlands – Approx. 5 acres

- Coastal Zone – Approx. 16 acres (Including Beach and Dunes)

Management Efforts

- Canada Goose Surveys
 - Hazing techniques
 - Screamers, lasers, and remote-control cars
- Wetland Restoration Project
 - Removing invasive plants
 - Making area more accessible to public
- Beach Nesting Bird Monitoring
- Rare Beach Plant Monitoring
- Predator Surveys

Rare Species

- Piping Plover

- Federally Endangered

- 2 pairs nested in NPA in 2019
 - First successful pair in a decade

- Least Tern

- State Endangered

- Small colony in NPA in 2019

- American Oystercatcher

- Species of Concern

- 1 Pair nested in NPA in 2019

Rare Species

- Osprey

- State Threatened

- 2 successful pairs nested in 2019

- Bald Eagle

- State Endangered

- Frequently sited in the off-season

- Seabeach Amaranth

- Federally Threatened

- 39 plants in 2019
 - 6 plants in 2018 and 1 plant in 2017

* Other State-listed species include yellow and black-crowned night herons, black skimmer, horned lark, northern harrier, seabeach evening primrose, sea-milkwort, seabeach sandwort, seabeach purslane and Fowler's toad

Regulations

- AR 200-1 – Army Environmental Regulation
- Endangered Species Act
- Wetlands Protection Act
- Coastal Zone Management Act

NGTC Specific Documents

- Beach Raking Permit
- NJDEP Wetland Letter of Interpretation (2 Aug 2022)
 - Document that defines the location of all wetlands on site.
- Integrated Natural Resource Management Plan (2018)
 - Overall document that describes how NJARNG/NJDMAVA will manage natural resources at the NGTC.

NGTC Beach and Protection Areas

Protection Measures

- In effect from 15 March to 1 December.
- Scope of protection measures are determined by the presence/absence of rare species.
- Protection area may change depending on location of species.
- NJDEP and CWF performs regular surveys of entire NJ beaches to enforce protection measures (April 1 to August 31).
 - Delayed opening of the range until 0800 hours two days during the work week between 1 April and 31 August to allow NJDEP to conduct survey. This management practice will be suspended after July 1 if no piping plover or least tern nesting activity has been observed by that date.
- Environmental staff will monitor the beach on a regular basis between April and December.
- Legitimate emergency negates all protection measures.

Installing Fence

Protection Measures: Level 1

General Measures Include:

- String and sign fence installation around protection areas in early April.
- No beach raking, vehicle use, or pedestrian traffic in the protection areas.
- No beach raking in front of the northern protection area (no rake zone).
- No pets on the beach.
- Predator prevention and litter/trash overflow control to reduce predators.
 - NJDEP may conduct predator control this spring and summer.
 - Last year removed 10 red foxes and 2 opossums.
- CWF and NJDEP will continue weekly survey.
- Helicopters will not fly over or within 475 lateral feet of northern rare species protection area and achieve a minimum altitude of approx. 500 feet. Not applicable if safety is compromised - implemented at the pilot's discretion.

Protection Measures: Level 2

Measures when rare species nesting, but chicks not present (Level 2):

- All general protection measures in effect
- Vehicles (including beach rake) are not allowed to drive through the no rake zone. Vehicle buffer signs will be in place.
- Vehicles will be routed around the protection area via the “Range Road Driving Route”
- Depending on the location of nests, physical training on the beach may be moved or curtailed.

Protection Measures: Level 3

Protection Measures when chicks are present (Level 3):

- Continue with general procedures.
- **NO VEHICLE TRAFFIC WHATSOEVER IN THE NO RAKE ZONE.**
Vehicles will be routed around the protection area via the “Range Road Driving Route.”
- **NO ROUTINE VEHICLE TRAFFIC/RAKING WITHIN 300 FEET OF PROTECTION AREA** (subject to change based on brood dynamics – such as the mobile chick from 2009).
- Pedestrian activities (such as ball playing) and some beach access may be limited. Fishing area may be shifted or closed down depending on proximity to nests and chicks.
- Bona fide emergency negates protection measures. This does not include routine lifeguard or police patrols.
 - After an emergency, responders must prepare an After Action Report and forward it to NGTC and NJDMAVA (William McBride at william.mcbride@dmava.nj.gov) NLT 24 hrs after incident.

Protection Measures: Plants

Protection Measures when Protected Plants are Present:

- Continue with general procedures.
- Any plants growing outside the protection area will be fenced with a 3-meter buffer around each plant.

Protection Measures

Military Training

- All protection measures in effect.
- Conduct a briefing 1 month prior to training event with unit commander where a unit “rare species monitor” will be identified.
- Unit Rare Species Monitor will ensure that all protection measures are met.
- For sea survival skills, unit will launch life rafts/jet skis from outside protection area/buffer zone and keep vehicles in military parking area while on beach.

Conclusions

- Several rare species call Sea Girt NGTC home
- Sea Girt NGTC is required under several Federal, State, and Army Regs. to protect them.
- Compliance with regulations depend on YOUR actions. So please follow the rules.
 - If we get an enforcement action from USFWS or NJDEP we must report it to the US Army, so everyone knows when we've been bad.
- Contact NJDMAVA (William McBride at william.mcbride@dmava.nj.gov) in early planning stages if activities are planned on the beach that may impact rare species.
- Protection measures may change depending on annual life cycles of rare species.

QUESTIONS?

“I’m often asked, why bother saving a bird like the piping plover, what purpose does it really serve?.....To me, any case to be made for the “value” of a species like the piping plover ultimately comes down to defining what type of world we want to live in. If the beach is to be more than just a commodity...or simply a place to play out our recreational whims – I believe for most people the beach and oceans hold a deeper place in their psyches – then our native wildlife and plants must have an equal place in the equation.”
